PROJECTS

E-commerce site with apparel shoping with customer preference analysis

- The project “E-commerce site with apparel shopping with customer preference analysis” is developing an apparel export company and which is using Python as Front end and MYSQL as back end . The main goal of this service is to providing online solution for reaching maximum number of users. Background of various market segments and the apparel shopping behavior of individuals have been studied from innumerable perspectives, and many of the concepts and findings have helped marketers gain a better understanding of the characteristics of apparel shoppers. This application is to develop a web portal and automating the process of ordering apparel items via online.
